

June 14

In the beginning God created the heavens and the earth. (Genesis 1:1)

Geologists say the Earth was formed many millions of years ago. The Bible tells us nothing about when the Earth was formed—just that it was already in existence when God began to prepare it for man to live upon. There is no conflict between true science and the Bible. Job 38:4

Read the following passage and answer the questions. Some questions do not have the answers in the paragraph, but do you know the answer anyway?

Earth is the third planet in our solar system. It is the only planet known to support an atmosphere with oxygen. Oxygen is what we breathe into our lungs to live. Earth also has many oceans and waterways that support aquatic life. Living animals and plants also need water to survive. One feature that God has given the Earth is the water cycle. This cycle helps to replenish Earth's atmosphere, ground, and oceans with the water we all need to live. 70% of the planet is covered in water. Earth has one moon and revolves around the Sun in a little less than 365 days.

1. Earth is the _____ planet in our solar system. Can you name any other planets?
2. We need _____ to breathe. Do you know what plants need to breathe?
3. There are many oceans on Earth. Can you name at least 2 of the oceans?
4. Earth has _____ moon. What planet has the most moons?
5. Earth is covered in _____ of water. Write that number figure in words.
6. It takes _____ for Earth to revolve around the Sun. What does revolve mean?

Label the parts of the water cycle with the correct word.
